SUMMARY

Software Engineer with 2.5+ years of experience developing and maintaining scalable Python-based backend systems on AWS. Strong experience in building and supporting REST APIs, handling third-party integrations, and improving system reliability and performance in production environments. Proven ability to debug complex issues, optimize existing systems, and collaborate effectively in Agile teams to deliver high-quality software.

EXPERIENCE

Philips

Software Development Engineer I

Bengaluru

Jul 2024 – Present

- Designed and maintained Python-based serverless applications using AWS Lambda and DynamoDB, ensuring high availability and performance
- Developed and supported REST APIs and third-party integrations, improving system scalability and reducing failure rates
- Led debugging and root cause analysis of complex production issues, improving system reliability and error handling mechanisms
- Refactored and optimized 10+ AWS Lambda functions, improving code quality, maintainability, and reducing technical debt
- Implemented robust validation and error-handling strategies, enhancing API reliability and reducing runtime failures
- Collaborated with cross-functional teams in an Agile environment, participating in sprint planning, code reviews, and feature delivery
- Enhanced CI/CD pipelines and resolved 20+ security vulnerabilities, ensuring secure and reliable deployments
- Optimized API performance and reduced latency through efficient request handling and backend improvements

Philips

Software Development Engineer Intern

Bengaluru

Aug 2023 – Jul 2024

- Developed and integrated REST APIs across distributed microservices, enabling seamless service communication
- Migrated legacy frontend to React.js, improving scalability and application performance
- Collaborated within Agile teams to deliver features and improve system functionality
- Built Qlik Sense dashboards for real-time analytics and reporting

PROJECTS

Dr. CNN – Lung Condition Detection | Python, TensorFlow

- Built a Python-based web application with an end-to-end pipeline for data processing, model training, and real-time inference
- Designed scalable APIs for serving predictions and handling real-time requests efficiently
- Implemented data preprocessing, model integration, and performance optimization for reliable predictions

SKILLS

Languages: Python, TypeScript, Java

Backend: REST APIs, Microservices, API Design, System Integration

Cloud & DevOps: AWS (Lambda, DynamoDB, S3, CloudWatch), CI/CD

Tools & Technologies: Git, Docker (basic), SonarQube

Databases: DynamoDB, GraphDB

Testing: Pytest, Moto, Tox

Frontend: React.js, HTML, CSS

EDUCATION

Lovely Professional University

Integrated B.Tech & M.Tech, Computer Science — CGPA: 8.56

Aug 2019 – Jun 2024

Academic Topper Award
